All decals are self adhesive application

Remove all grease from frame.

Peel off back card and apply in position on frame, ensuring no air bubbles, and decal is firmly adhered to frame.

On current style decal, there is an additional layer of protection on top of the decal. Peel off the top clear coating leaving the decal in place. If decal does start to lift when removing the clear coat, apply pressure to the decal whilst peeling the cover off.

Decals can be applied before final lacquer if required.
